

Out-of-Zone Engine Rotation

The unit that provides engines for out-of-zone dispatches will be determined from the following lists. Each Dispatch Center will have separate lists. The functionality and process will be the same for both Dispatch Centers when filling out-of-zone orders. The list order was randomized at the beginning of the season. In the interest of timeliness this list is not used for initial attack help of neighboring units. Neighboring units will receive engines under the closest forces concept.

How does it Work?

The availability of engines is set by the Duty Officer each morning using the REBOL Intel system. Only fully staffed, fully qualified engine modules will be sent out-of-zone. Duty Officers will determine which engine and personnel will be sent from their unit. When an order is received, Dispatch will use the list to place a call to the Duty Officer representing the first unit which has an available resource that can provide for that order. If the Duty Officer chooses to fill the order then the Dispatch Center will fill the order and move the unit to the bottom of the rotation list. If the Duty Officer denies filling the order then they forfeit that opportunity and Dispatch will move their unit to the bottom of the rotation list. If a unit is name requested or an agency only resource order is requested and filled then that unit is moved to the bottom of the rotation list. If a unit has a resource available that does not provide for the needs within the order they will not be called by Dispatch and their position within the rotation remains the same.

For the purpose of both lists, the units represented are:
